Rohan Bhangui

Designer & Developer
Phone: 416-807-4019
Email: rohan@bhangui.com
Website: rohan.bhangui.com

Goal
To contribute to, learn from and potentially teach/train a highly motivated and skilled team of UX/UI developers and designers.

Employment
- **(October 2019 – Present) ATP Inc.** – Software Developer
  - Tasked with designing and building a react based troubleshooting software for the aerospace industry. Specifically focused on building applications that are comprehensive and easy to use across a variety of age demographics and fields. Due to the mono repo nature of the product, tech stack included ReactJs, React Native, Styled Components and Electron. Application was designed in Adobe XD.
- **(April 2019 – October 2019) Vyana Inc.** – React Developer
  - Tasked with building a react based management application for a multi-billion dollar construction and waste management company. Tech stack used includes ReactJS, Redux, Styled Components and MaterialUI. All code is functionally written with hooks and leverages typescript type checking to make sure code is type error free. Also used redux forms for data collection and validation.
- **(November 2018 – April 2019) Groupby Inc.** – Solutions Architect
  - Tasked with building client demos and new cutting edge features for our sales team. Worked to develop innovative approaches to using existing products to build better features. Utilized a similar stack to that when I was working as a Customer Solutions Front-end Specialist
- **(February 2017 – November 2018) Groupby Inc.** – Customer Solutions Front-end Specialist
  - Initially brought in as a subject matter expert for styling and AAA accessibility compliance, I worked in a team that delivered a frontend search solution to one of the largest pharmacies in the United States. Worked with clients to build out new functionality that funnelled into our core frontend product that made building search experiences based on our platform efficient and effortless. Technologies used include ReactJS, Redux, Styled Components as well as SCSS and some experience with MaterialUI.
- **(July 2016 – February 2017) AP1 Inc.** – Frontend Designer & Developer
  - In charge of non-production level frontend development and all design work. Worked closely with head of product, sales and marketing to come

up with frontend and marketing material used to simply understanding of beacon technology and its advantages for users, advertisers and real world space owner. Converted branding to produce strong identity and transform how beacons are viewed.

- **(February 2016 – July 2016) Bond Brand Loyalty** – Frontend Designer & Developer
    - In charge of managing frontend for various global, tier-1 clients that include one of the 5 major banks in Canada, a pharmaceutical company and one of the "big-3" USA-based automakers. Major technologies used include jQuery and AngularJS. Did some additional work with art directors in coming up with captivating landing pages and electronic campaigns
- **(July 2015 – December 2015)** S&P Capital IQ – CSS Designer & Developer
    - Parachuted into a role where my primary goal was to manage CSS styling for a very complex portfolio management and simulation software. Worked with designers all the way to frontend and logic implementation programmers to come up with a cohesive design and create functional aesthetics. Was exposed and wrote some code in JS libraries such as jQuery, AngularJS and ReactJS in some cases. Design duties included exploring typography, color composition and working with UX architects on user flows in the context of functionality-first design
- **(September 2013 – Nov 2014)** Robido Media – Lead Designer & Developer
    - Co-founder at a design and development consultancy start-up. Primarily in charge of user experience and user interface for all projects. Secondary duties include assisting with the development side including writing HTML/CSS/JS as well as working on backend such as MySQL and PHP. Worked closely with backend developers to make sure frontend integrated correctly with back end code and infrastructure which included optimization for both.
- **(June 2013 – September 2013)** Higher – UX/UI Developer
    - A university start-up interested in helping students submit multiple part time job applications by filling out a single form. Was in charge of making sure that frontend and backend were compatible with one another and that the user interface was easy to elegant and easy to use.
- **(September 2011 – Present)** – Freelance Designer & Developer
    - Worked on various contracts concerning identity worked but also ventured into fully custom, built-from-the-ground-up websites as well as designing print and other online media. Majority of the development work used technologies such as jQuery, AngularJS and MeteorJS to build custom interfaces for clients. I have also worked with creating interfaces for hybrid apps using PhoneGap. More recently, I have switched to a ReactJS, Redux with some NodeJS/ExpressJS stack. I also actively contribute to the dribbble community with resources that I feel will compel others to pursue excellence in design

Skills

- HTML/5
- CSS/3
- JavaScript
- jQuery
- ReactJS
- Redux
- Styled Components
- ExpressJS
- Webgl

Tools

- Photoshop
- Illustrator
- Sketch 3
- Sublime Text 3
- InDesign
